No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The PSMA-like gene is mapped to chromosome 11q14.3, to the schizophrenia disorder type II locus. Antibodies directed against PSMA-like protein are useful for diagnosing cancers (prostate, bladder, pancreatic, sarcoma, melanoma, lung or kidney) or neurological disorders such as schizophrenia. They may also be used for screening for ligands of PSMA-like protein and imaging cells expressing PSMA-like protein.

                                                                          AA065520 encodes a prostrate specific membrane antigen (PSM, AAR55097 The PSM coding sequence is useful for suppressing or modulating the metastatic ability of prostate tumour cells to grow, or for eliminating them. The protein is useful to identify or purify ligands of the Ag. It is also an attractive target for Ab-directed imaging and targeting of prostatic tumour deposits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Prostate-specific membrane transmembrane glycoprotein; antibody detection; ds.

Evaluating cell-mediated immunity, in particular cytotoxic T lymphocyte responses, by implanting vascular cells, useful for treatment and presearch models for directly targeting tumor neovasculature - xx

Evaluating cell-mediated immunity comprising implanting vascular cells into an immunodeficient mammal. CC comprising implanting vascular cells into an immunodeficient mammal. CC establishing an immune response in the mammal, and assaying a characteristic to determine cell-mediated immunity in the mammal. The CC comprising an immune response in the mammal, and assaying a comprising an immune response in the mammal invention are useful for the CC continued and compositions of the present invention are useful for the cc used for making research models targeting tumour neovasculature. They can also be continued growth. This approach at targeting tumour neovasculature. They can also be continued growth. This approach alms to disrupt to support their continued growth. This approach alms to disrupt a tumour's supply of nutrients to cause it to die or at least limit its growth. This sequence crepresents a DNA associated with the neo-vascularature preparation for treatment of cancer desciribed in the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Db
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δõ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g
response against a cell comprising a target antigen (I) in a subject, cureating a subject having undesired cells, for example tumour cells or virally infected cells (C), reducing the number of (C) in a subject, and stimulating presentation of (I) by a cell. This is done by a diministering a polynucleotide (II) encoding a variant of (I), so that (II) expressed in a cell and cell-mediated immune response is induced. The method can be used to treat prostate cancer, breast cancer, colorectal cancer and pancreatic cancer, as well as lymphomas and leukaemias. The method is also useful in treating chronic viral infections such as those caused by hepadnaviruses, lentiviruses and the flaviviruses and pestiviruses. The present sequence represents the coding sequence of human prostate specific membrane antigen (PSMA) variant which has the signal sequence deleted, used as a target antigen in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Inducing a cell-mediated immune response against a target antigen, reducing undesired cells and stimulating presentation of an antige a cell, comprises administering a polynucleotide encoding a varian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (AMBI-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method of diagnosing (I) the onset or CC progression of benign prostatic hyperplasia (BPH), or screening (II) for CC or identifying an agent that modulates the onset or progression of BPH. CC The method is based on changes in gene expression in BPH tissue isolated from patients exhibiting different clinical states of prostate (CC hyperplasia as compared to normal prostate tissue. (I) comprises CC detecting the expression levels of one or more genes in prostate cells (II) comprises preparing a first gene expression profile CC prostate cells. (II) comprises preparing a first gene expression profile CC agent, preparing a second gene expression profile of the agent exposed (CC cells, and comparing the first and second gene expression profiles. (II) is useful for diagnosing the onset or progression of BPH. (II) is complised to progression of BPH. (II) is useful for identifying an agent that modulates the onset or progression CC fevel of genes given in the specification in the tissue or cells to the cexpression level in a tissue or cells, by comparing the expression cells of genes given in the database, and displaying the compared to the expression level in a progression in the tissue or cells sample (CC compared to the expression level in a permitted on the tissue or cells sample (CC compared to the expression level in BPH. Agents using (II) are useful for treating BPH or prostate cancer. ABK64106-ABK64860 represent human (CC benign prostatic hyperplasia gene sequences of the invention.)

                                                                                                           CC anti-neoplastic agent. The method involves exposing cells to a chemical Ca agent to be tested for anti-neoplastic activity, determining a change in CC expression of at least one gene (I) of a signature gene set, where (I) CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664 CC to ABL70110), or is at least 95% identical to (S), where a change in CC expression is indicative of anti-neoplastic activity. (I) has cytostatic CC activity and can be used in gene therapy. MI can be used for screening CC an anti-neoplastic agent, and can be used for producing a product which CC is the data collected with respect to the anti-neoplastic agent as a CC result of MI, and the data is sufficient to convey the chemical CC treatment of cancer such as colon, breast, stomach, lung, thyroid, CC oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell carcinoma, neuroendocrine CC carcinoma, carcinoma, clear cell carcinoma, neuroendocrine CC carcinoma, acadilary carcinoma and wilm's tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         28-SEP-2000;

cluster. Also described is a vaccine or immunotherapeutic composit. (VC) comprising (I). (I) has cytostatic activity. VC is useful for treating an animal, by administering to an animal the vaccine or immunotherapeutic composition. VC is also useful for evaluating immunogenicity of a vaccine or immunotherapeutic composition.

(I) is useful for determining specific T cell frequency, by contacting T cells with a MHC-peptide complex, and further comprises ELISPOT analysis, limiting dilution analysis, flow cytometry, in situ hybridisation and/or polymerase chain reaction (PCR). ABQ83843 to ABQ83858 and ABP74128 to ABP74713 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Match
                                                                                                                                                                                                                                                                                                                         1199
                                                                                                                                                                                                                                                                                                                                                                                                 1079

                                                                                                                                                                                                                                                                                                                                           a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of t specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;

The invention relates to an isolated nucleic acid molecule (I) a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) c specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancel (b) monitoring the progression of prostate cancer in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; prostate pharmacogenomic
                                                                                                                    Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer.
                                                                                            Claim

Novel isolated prostate cells for detecting p presence nucleic acid molecule associated with cancerous state of and correlating with presence of prostate cancer, useful presence of prostate cancer -

a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) c specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cance (b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostat (d) assessing the efficacy of a test compound in a patient;
(c) assessing the efficacy of a theorem. selecting a composition for inhibiting prostate cancer i assessing the prostate cell carcinogenic potential of a determining whether prostate cancer has metastasized in assessing the aggressiveness or indolence of prostate can also useful as a pharmacodyanamic or pharmacogenomic in a patient; cancer in a r in a patient; a compound; in a patient; cancer; marker

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Prostate-specific membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Prostate-specific membrane
                                                                                                                                                      A cDNA clone (AAT36785) codes for human 100 kDa prostate-specific membrane (PSM) antigen (AAW02234), an integral membrane glycoprotein that is very highly expressed in prostatic tumours and metastases. It was obtd. from lymph node carcinoma of prostate (LNCaP) cell mRNA by PCR amplification (see also AAT36795-808) and screening of ar LNCaP cDNA library using an amplified cDNA partial clone as probe The cDNA can be used to provide probes and primers useful e.g. in detecting hematogenous micrometastatic tumour cells and determining prostate cancer progression (see also AAT36827-30 and AAT36813-18), and in gene therapy. An alternatively spliced PSM, PSM', has a shorter cDNA sequence. PSM genomic DNA is given in AAT36786.
                                                                                                                                                                                                                                                                                                                                          Fair
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bloactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ashkenazi

                                                                                                                                                                                                                                                                                                                                                                                 γQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR CC primers for PRO polypeptides of the invention. The sequences of the CC invention can be used to detect the presence of a tumour in a mammal by CC comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a CC higher level of expression in the test sample indicates the presence of a CC tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, CC pigs, goats and rabbits but are preferably human. The polypeptides can be CC used to stimulate tumour necrosis factor (TWF) alpha release from human CC stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also consceptibility to tumour development, particularly adrenal, lung, colon, can be used for genetic analysis of individuals with genetic disorders.

CC can be used for genetic analysis of individuals with genetic disorders.

```
FUNCTION: Has both folate hydrolase and N-acetylated-alpha-linked-acidic dipeptidase (NAALADase) activity. Has a preference for trialpha-glutamate peptides. In the intestine, required for the uptake of folate. In the brain, modulates excitatory neurotransmission through the hydrolysis of the neuropeptide, N-aceylaspartylglutamate (NAAG), thereby releasing glutamate. Stable at pH greater than 6.5. Isoforms PSM-4 and PSM-5 would appear to be physiologically irrelevant. Involved in prostate tumor
progression.
FUNCTION: Also exhibits a dipeptidyl-peptidase IV type activity
```

In vitto, cleaves Gly-Pro-AMC.
-!- CATALYTIC ACTIVITY: Release of an unsubstituted, C-terminal glutamyl residue, typically from Ac-Asp-Glu or pteroyl-gamma.
-!- COFACTOR: Zinc; Binds two ions per subunit. Required for NAALADase activity

NAAG, quisqualic acid, 2-(phosphonomethyl) penta (PMPA) and EDTA. Activated by cobalt. SUBCELLULAR LOCATION: Type II membrane protein. The PSMA' isoform is cytoplasmic. ENZYME REGULATION: The NAALADase activity S. pentanedioic inhibited by beta-

Plasma membrane

TISSUE SPECIFICITY: Highly expressed in prostate epithelium. Also expressed, in the small intestine, brain, kidney, liver, spleen, colon and the capillary endothelium of a variety of tumors. Expressed specifically in jejunum brush border membranes. In the brain, highly expressed in the ventral striatum and brain stem. I the prostate, the PSMA' cytosolic isoform is the most abundant form in normal tissue, the membrane-bound PSMA-1 form in primary prostate tumors. The PSMA-2 isoform also found in normal prostate as well as in brain and liver.

INDUCTION: In the prostate, up-regulated in response to androgen Also

deprivation.

- i DOMAIN: The NAALADase activity is found in the central region, the dipeptidyl peptidase IV type activity in the C-terminal.

- i PTM: The first two amino acids at the N-terminus of isoform PSMA, appear to be cleaved by limited proteolysis.

- i PTM: The N-terminus is blocked.

- i DISEASE: Defects in FOLH1 may be a cause of hyperhomocysteinemia (HHC), a condition associated with increased risk of (HHC), a condition associated with increased risk of the condition associated with the

MISCELLANEOUS: PSMA is used as a diagnostic and prognostic indicator of prostate cancer, and as a possible marker for neurological disorders such as schizophrenia, Alzheimer's of the control of the con disease various

and Huntington's disease.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY M28B.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        excitatory neurotransmission through the hydrolysis of the neuropeptide, N-aceylaspartylglutamate (NAAG), thereby releasing glutamate. Maximal activity at pH 6.0.
FUNCTION: Also exhibits a dipeptidyl-peptidase IV type activity (By similarity). In vitro, cleaves Gly-Pro-AMC (By similarity). CATALYTIC ACTIVITY: Release of an unsubstituted, C-terminal glutamyl residue, typically from Ac-Asp-Glu or ptercyl-gamma. COPACTOR: Zinc; Binds two ions per subunit. Required for NAALADase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             jejunum brush-border membrane. Weak expression DOMAIN: The NAALADase activity is found in the dipeptidyl peptidase IV type activity in the C-SIMILARITY: BELONGS TO PEPTIDASE FAMILY M28B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (By similarity).

"Prostate-specific membrane antigen is a hydrolase w
pharmacologic characteristics of a neuropeptidase.";
Proc. Natl. Acad. Sci. U.S.A. 93:749-753(1996).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -!- FUNCTION: Also exhibits a dipeptidyl-peptidase IV type activity (By similarity). In vitro, cleaves Gly-Pro-AMC (By similarity).
-!- CATALYTIC ACTIVITY: Release of an unsubstituted, C-terminal glutamyl residue, typically from Ac-Asp-Glu or pteroyl-gamma.
-!- COFACTOR: Zinc; Binds two ions per subunit. Required for NAALADO

                                                                                                                                                                                                                                                                                  TISSUE SPECIFICITY: Widely expressed throughout brain regions with highest levels in the hippocampus, dentate gyrus, priform cortex, choroid plexus of venticles, pineal gland, anterior lobe of the pituitary gland and supraoptic nucleus. High levels also found in the cerebral cortex, substantia nigra, pontine nucleus and the granule cell layer of cerebellum. Highly expressed in astrocytes and non-myelinating Schwann cells. Also expressed in kidney, localizing to the proximal brush border of the renal tube. DOMAIN: The NAALADase activity is found in the central region, the dipeptidyl peptidase IV type activity in the C-terminal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: Has both folate hydrolase and N-acetylated-alpha-linked-acidic dipeptidase (NAALADase) activity. Has a preference for trialpha-glutamate peptides (By similarity). In the intestine, required for the uptake of folate. In the brain, modulates excitatory neurotransmission through the hydrolysis of the

(By similarity).

-! TISSUE SPECIFICITY: Expressed predominantly in the nippurumeration of the brain and in kidney. Lower levels in the ovary, testis and mandibular gland.
-! DOMAIN: The NAALADase activity is found in the central region, the dipeptidyl peptidase IV type activity in the C-terminal.
-! SIMILARITY: BELONGS TO PEPTIDASE FAMILY M28B.
-! CAUTION: There are amino acid differences between the sequence shown in fig.1 (Ref.1) and the sequence deposited in the database (AF026380). The sequence from fig.1 shows only 3 conflicts between Ref.1 and Ref.2. These are at AA positions 141, 240 and 287.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    28-FEB-2003 (Rel. 41, Last sequence update)

Nature 409:685-690(2001).

-i- FUNCTION: Has both folate hydrolase and N-acetylated-alpha-linked-acidic dipeptidase (NAALADase) activity. Has a preference for trialpha-glutamate peptides (By similarity). In the intestine, required for the uptake of folate. In the brain, modulates excitatory neurotransmission through the hydrolysis of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mus musculus (Mouse).

ENZYME REGULATION: The NAALADase and are inhibited by quisqualic acid.

Type II membrar
                                                                                                                                                                                                                                                                                                                                                                                                                                                  neuropeptide, N-aceylaspartylglutamate (NAAG), thereby releasing lutamate.

FUNCTION: Also exhibits a dipeptidyl-peptidase IV type activ. (By similarity). In vitro, cleaves Gly-Pro-AMC (By similarit) (CATALYTIC ACTIVITY: Release of an unsubstituted, C-terminal glutamyl residue, typically from Ac-Asp-Glu or pteroyl-gamma COFACTOR: Zinc; Binds two ions per subunit. Required for NAAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FROM N.A.

Chem. 274:8470-8483(1999).

FUNCTION: Has N-acetylated alpha-linked-acidic dipeptidase (NAALADase) activity. Also exhibits a dipeptidyl-peptidase activity. In vitro, cleaves Gly-Pro-AMC.

CATALYTIC ACTIVITY: Release of an unsubstituted, C-terminal Chempyl residue, typically from Ac-Asp-Glu or pteroyl-gamm glutamyl residue, typically from Ac-Asp-Glu or pteroyl-gamm glutamyl residue, typically from Ac-Asp-Glu or pteroyl-gamm
                                                                                                                                                                                                                                                                      putamen and superior colliculus.

DOMAIN: The NAALADase activity is found in the dipeptidyl peptidase IV type activity in the SIMILARITY: BELONGS TO PEPTIDASE FAMILY M28B.
                                                                                                                                                                                                                                                                                                                                                                  SUBCELLULAR LOCATION: Type II membrane protein (Potential). TISSUE SPECIFICITY: Highest expression in the testis. Also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CATALYTIC ACTIVITY: Release of an unsubstituted, C-terminal glutamyl residue, typically from Ac-Asp-Glu or pteroyl-gamma. COFACTOR: Zinc; Binds two ions per subunit. Required for NAALADase activity (By similarity).
SUBCELLULAR LOCATION: Type II membrane protein (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DOMAIN: The NAALADase activity is found in the central r dipeptidyl peptidase IV type activity in the C-terminal. SIMILARITY: BELONGS TO PEPTIDASE FAMILY M28B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (NAALADase) activity (By similarity). Also exhibits a dipeptidyl-peptidase IV type activity. In vitro, cleaves Gly-Pro-AMC (By

```

brush border membrane protein) (I100)

, 11 ° n.g; ...

```
J. Biol. Chem. 272:31006-31015(1997).

- FUNCTION: NAALADase-like activity unknown. Has no NAAG hydroly activity. Exhibits a dipeptidyl-peptidase IV type activity. If vitro, cleaves Gly-Pro-AMC (By similarity).

- CAPALYTIC ACTIVITY: Release of an unsubstituted, C-terminal glutamyl residue, typically from Ac-Asp-Glu or pteroyl-gamma.

- COPACTOR: Zinc; Binds two ions per subunit (By similarity).
                                                                                                                                                                                                                                     This SWISS-PROT entry is copyright.
